

SPAX® MDF/HARDWOOD SCREWS

SPAX® MDF Screws are specifically designed to prevent splitting in Medium Density Fiberboard (MDF) and hardwoods without pre-drilling. Also very effective for attaching lightweight, high-density polyurethane trim.

- Unique “CUT Point” and patented thread serrations prevent splitting without pre-drilling.
- T-Star drive provides superior bit engagement.
- Trim head design with cutting ribs under the head allows flush or countersunk installation for a clean look.

SPAX® MDF Screw
T-STAR Flat/Trim Head, Partial Thread
